

Measuring progress towards ~~the~~ **some** Sustainable Development Goals

The United Nations Sustainable Development Goals (SDGs) are targets for global development adopted in September 2015, set to be achieved by ^{2020, 2025 and} 2030. Here we present data across all available indicators from the [Our World in Data](#) database tracking progress towards these goals around the world.

Comment: The agreed UN development agenda is wider and more ambitious than that, not least because it includes reaffirmation of existing goals such as safe water and sanitation for all in least developed countries by 2020, and adequate water, sanitation, drainage and waste services for all by 2025.
